Commit Sheet — 01_Menu.gs v2.18.0 → v2.19.0 (decision-first menu)

Saturday 17 October 2026 · Part A1 of the Decision Pages v2 execution plan · Author: Claude · Applier: Emad (paste) · Verifier: Claude (IDE read-back)

Base pin

Item	Value
File	`01_Menu.gs` in the bound project `1IvEj8sw…LPU2-`
Live version	`SCRIPT_MENU_VERSION = '2.18.0'` (L354)
Live length / sha-256 (first 12)	119,863 chars · `853e24b980ff` (read from the IDE 17 Oct ≈ 17:05)
Delivered	`01_Menu_v2.19.0_append.gs` — 517 lines, sha-256 `71b690a2fd00` (append block)
Change type	**Append + 5 one-line renames.** No existing function body is edited or deleted; the legacy builders stay in the file, unused. Rollback = undo the renames.

Anchored edits (apply in this order, then save once)

#	Line (live)	Current text	New text
1	L354	`var SCRIPT_MENU_VERSION = '2.18.0';`	`var SCRIPT_MENU_VERSION = '2.19.0';`
2	L355	`var ROOT_MENU_TITLE_ = '👤 Emad Bahbah Financial Advisor';`	`var ROOT_MENU_TITLE_ = '🧭 TFB Cockpit';`
3	L373	`function buildMenu_() {`	`function buildMenuLegacy_() {`
4	L616	`function menuIsDecisionOwnedPage_(pageName) {`	`function menuIsDecisionOwnedPageLegacy_(pageName) {`
5	L1049	`function menuDecisionOwnedAction_(page, actionKey) {`	`function menuDecisionOwnedActionLegacy_(page, actionKey) {`
6	end of file (after L1764)	—	paste the whole of `01_Menu_v2.19.0_append.gs`

Line numbers are from the live v2.18.0 file; use Ctrl+F on the "Current text" if they have shifted. The quote style in the live file may be double quotes — keep whatever is there; only the token changes.

What the block defines

- `buildMenu_()` (new root builder) and the submenu builders `buildTodayMenu_`, `buildDecisionPageSubMenu_`, `buildPortfolioDecisionMenu_`, `buildMyPortfolioMenu_`, `buildPortfolioLedgerMenuV2_`, `buildActivePageMenuV2_`, `buildEnginePagesMenu_`, `buildLayoutsMenu_`, `buildConfigurationMenuV2_`, `buildConfigDispatchMenu_`, `buildDiagnosticsMenu_`, `buildUtilitiesMenuV2_`, `buildSyncHoldMenuV2_`, `getTop10DecisionExtrasV2_`.
- Reused unchanged: `buildPageSubMenu_`, `getPageMenuHandlers_`, `getGlobalMarketsExtras_`, `buildConfigConnectionMenu_`, `buildConfigAutoRefreshMenu_`, `buildConfigScheduleAuditMenu_`, `buildConfigVerifyMenu_`, every existing `menu…_` wrapper, `invokeMenuAction_`,

`menuCallFirstAvailable_`, `menuRunWithManualRefreshPriority_`, `navigateToPageByName_`, `menuGetGlobalFunction_`.

- `menuIsDecisionOwnedPage_` (new): also treats `Portfolio_Decision` as decision-owned (`MENU_DECISION_OWNED_EXTRA_`) ahead of the 00_Config registry change (Part A2).
- `menuDecisionOwnedAction_` (new): page-aware — Portfolio_Decision routes to `buildPortfolioDecisionLayout` / `refreshPortfolioDecision`, Top 10 to `buildDecisionTop10Layout` / `refreshDecisionTop10`.
- New wrappers: `menuNavigatePortfolioDecision_`, `menuMorningCockpitRefresh_` (→ `tfbMorningCockpitRefresh`), `menuIbkrEvidenceStatus_` (reads `PD_IBKR_EVIDENCE`, `PD_SOURCE_RECEIPT`, `PD_IBKR_CAPTURE_FOLDER_ID`; newest file age vs 14 min), `menuIbkrCaptureNow_` (→ `pdIbkrCaptureWatch`), `menuInstallCaptureWatcher_` / `menuRemoveCaptureWatcher_`, nine `24_Sync_Dispatch` wrappers, four `25_Trade_Notes` wrappers, `menuCashLedgerSelfTest_`, six confirm-guarded wrappers (`menuGuarded…_`), and `menuV2SelfCheck_`.
- Removed from the UI (functions stay in the file): Quick Actions submenu, Symbols submenu, the seven engine items on Top_10_Investments that `DECISION_BLOCKED_ACTIONS_` redirected, the six ledger duplicates under My_Portfolio, Configuration ▸ Decision Cockpit and ▸ Diagnostics & Audits (merged into Diagnostics & Tests), Tests submenu (merged).

Harness (what to run after the paste)

1. **Save** (Ctrl+S) and confirm the editor shows no red marks. Reload the spreadsheet tab, or run Utilities ▸ 🔁 Reload Menu.
2. Root menu reads 🧭 **TFB Cockpit**; its first entry is 🧭 **Today**; a second top-level menu ⏸️ **TFB Hold** exists.
3. In the IDE run `menuV2SelfCheck_` → alert must say *Missing handlers: none* and list the five modules as *present*.
4. Today ▸ 🪪 IBKR Evidence: Status → shows mode `enforce`, the capture folder, the newest file and its age (expected STALE tonight).
5. Today ▸ 📡 Sync Dispatch Status → the 24_Sync_Dispatch status dialog (no dispatch is sent).
6. 📄 Top_10_Investments shows exactly: Navigate · Validate · Diagnose · — · Refresh Decision Top 10 · Build Decision Cockpit Layout · Audit Top_10_Investments.
7. 📄 My_Portfolio ▸ ⚠️ Build Page → a confirm dialog appears; **Cancel** leaves the sheet untouched (check `_Run_Log` has no build entry).
8. Executions page: no failed execution from `onOpen`.
9. Report back the new version string; I re-read the file from the IDE and record the new sha.

Risks and rollback

- A handler name that does not exist would only fail on click ("Script function not found") — `menuV2SelfCheck_` catches this before anyone clicks.
- `cashLedger_addMenuItems(menu)` is called inside a try; if 22_Cash_Ledger changes its signature the Today menu still builds without the cash items.
- Nested submenus (Engine Pages ▸ page ▸ items) are supported by `Menu.addSubMenu`; Configuration already nests to the same depth in v2.18.0.
- Rollback: rename the five anchors back (`buildMenu_`, `menuIsDecisionOwnedPage_`, `menuDecisionOwnedAction_`, title, version) and reload; the appended block becomes inert.

Not in this commit (by design)

- No change to any cockpit renderer, refresh path, gate, trigger or script property.

- `00_Config.DECISION_OWNED_PAGES_` is untouched (Part A2 adds `Portfolio_Decision` there; the menu already protects it locally).
