TFB Comprehensive Audit and Handover, 6 November 2026

Scope: one-time audit, repair and handover across providers, the Python/API service (Render), Apps Script, Google Sheets, the dashboard, and analysis/recommendations. **Audit window:** 6 Nov 2026, 21:20–22:30 UTC (7 Nov, 00:20–01:30 Asia/Riyadh). Report times are Asia/Riyadh; technical timestamps are UTC. **Repository baseline:** `main` at `a85edfc` (#921, merged 5 Nov 11:12 UTC). **Previous audits:** `comprehensive-audit-20261029.md` (backlog N1–N7, B4–B12 carried). This report builds on it and does not repeat its architecture section. **Status labels:** FOUND · PREPARED · APPLIED · TESTED · VERIFIED IN PRODUCTION · BLOCKED · ROLLED BACK

---

1. الملخص التنفيذي (عربي)

الحالة الحالية: خدمة Render تعمل وتستجيب (فحص الصحة 200 خلال 0.3–0.5 ثانية). لم تُسجَّل أي استجابة 5xx منذ 2 نوفمبر، وسُجِّل 502 واحد فقط في 1 نوفمبر. لكن الذاكرة بلغت **3.78 جيجابايت من 4.29 (88%)**، وهي أعلى من 82% في التدقيق السابق. النسخة المنشورة هي `729a316` (28 أكتوبر). الفرع الرئيسي متقدم عليها بـ43 دمجًا، غالبها سكربتات GitHub Actions وملفات SQL لا تحتاج نشرًا على Render. آخر مزامنة مجدولة (19:31 UTC) نجحت، وتقول ورقة `Plan_Of_Record` إن النشرة «EXECUTABLE» حتى 06:33 صباح 7 نوفمبر، لكن **بلا خطط ولا تذاكر تنفيذ**: «0 tickets | 0 plans».

ما أُنجز في هذه الجلسة: 1. **إصلاح مصدر ضغط حدود Yahoo** (PR مسودة، مُختبَر وغير منشور). تُظهر سجلات Render أن رموزًا متوقفة مثل HEWW وFM وKLD وIGN وSPLG تعيد 404 من خادمي Yahoo، ومع ذلك يعيد النظام طلب المعرّف نفسه عبر yfinance حتى ثلاث مرات ولكل صيغة من صيغ الرمز. هذا الهدر يستهلك حصة الطلبات، فيُرفض بعدها تاريخ أسعار رموز حية (EEX وBK) بخطأ 429. الإصلاح 8.16.0 `yahoo_chart_provider` مُعطَّل افتراضيًا. **عند تفعيله** يتوقف الرجوع إلى yfinance بعد 404 مؤكد من كل الخوادم، ويُحفظ الرمز كـ«مفقود» لمدة محددة. لا يُحفظ أبدًا أي فشل من نوع 429 أو 5xx أو انقطاع الشبكة. أُضيف 15 اختبارًا. 2. **تجديد الأسماء الموثقة.** كانت جميع الروابط الـ128 منتهية الصلاحية منذ 4 نوفمبر، والفحص اليومي أحمر 8 مرات من 8. شغّلتُ سير العمل الموجود مرة واحدة، فجُدِّد **122** اسمًا حتى 13 نوفمبر وبقيت 6 محجوزة. يلزم دمج طلب السحب الخاص بها.

أهم مشكلة لم تُحل: لا يمكن التحقق من المحفظة ولا من صفحات القرار مباشرة. أداة Drive تقرأ تبويبًا واحدًا فقط من ملف حجمه 14.7 ميغابايت، ويرفض التصدير الكامل لكبر الحجم. لذلك لم يمكن قراءة My_Portfolio وPortfolio_Decision وTop_10 بنسختيها. ولم يُقدَّم كشف حساب من الوسيط، **فالفرق بالريال مقابل الوسيط غير معروف، وليس صفرًا**. وفي 6 نوفمبر الساعة 15:12 بتوقيت الرياض فشلت مزامنة My_Portfolio بسبب «هوية ممسوكة أجنبية أو فارغة أو مكررة»، ثم عادت للنجاح مساءً.

جاهزية التوصيات: غير جاهزة للاستخدام التنفيذي. - البيانات: سجل الأداء بتاريخ 7 نوفمبر الساعة 00:21، على 3,865 نتيجة محسومة. - فئة «INVESTABLE» حققت نسبة نجاح 48.9% بمتوسط عائد 0.29%- قبل الرسوم، بينما حققت فئة «WATCHLIST» نسبة 55.9%، أي أن البوابة معكوسة. - درجة Brier بلغت 0.2864 مقابل خط أساس 0.25، وفئة الثقة 85–100 نجحت بنسبة 42.7% فقط. - **لا توجد فرصة مؤهلة** في هذا التقرير.

---

2. Access and baseline

Resource	Access this session	Status
GitHub repo	Clone, MCP (Actions runs/logs, PRs), workflow dispatch	Inspected
Render `srv-d4hnir15pdvs739bqe1g`	MCP read (service, deploys, logs, metrics) + live `/health`	Inspected (read-only)
Google Sheet `1QaOSNHq…wsG04`	Metadata OK (" Market Share Deepseek-V3", 14.7 MB, modified 2026-11-06T21:25Z, `canEdit:false`); content read returns 1 tab; xlsx export "too large", ODS timed out, CSV = first sheet only	**BLOCKED** for My_Portfolio, Portfolio_Decision(_v2), Top_10_Investments(_v2), cash/cost ledgers. 9 diagnostic tabs partly readable
Apps Script project	No Apps Script API; repository copies only (`apps_script/*.gs`)	**BLOCKED** (deployed-vs-repo parity unverifiable)
Dashboard (chatgpt.site)	Every path returns HTTP 401 "Sign in required" (ChatGPT login gate behind Cloudflare)	**BLOCKED** (3rd audit in a row)
IBKR	Not used, as instructed	n/a
Broker statements	None supplied	Reconciliation **BLOCKED**

Deployed revisions - Render live deploy `dep-dbh6gltg1s2s73d292ag` (manual, 28 Oct 21:25 UTC) → commit `729a316` (#871). Auto-deploy off by design. - `main` is 43 commits ahead. Of the non-test/doc/workflow/apps-script diff, only `core/providers/calendar_provider.py` is service-side Python; the rest is `scripts/` (run in Actions), `sql/bigquery/`, `config/`, `data/`. Whether the calendar change needs the web service is UNVERIFIED (it is consumed by `run_calendar_sync` in Actions). - `/health`: 200, `service_version 8.14.8`, `entry_version 8.14.8`, **`app_version 8.14.5`**, `routes_mounted_count 7`, `global_auth_enforcement true`.

3. Findings

3.1 Render / API — FOUND

Metric (source: Render MCP)	Value
HTTP 31 Oct–6 Nov (daily buckets)	200: 12,912 · 401: 25 · 499: 138 · 502: 1 (1 Nov) · other 5xx: 0
Peak memory 4–6 Nov (6 h buckets)	**3.78 GB / 4.29 GB = 88 %** (6 Nov 18:00Z); previous audits 84 % → 82 % → now 88 %
CPU (6 h avg)	0.05–0.34 vCPU
Latency metric	Render returned no `http_latency` series; `/health` measured 0.28–0.51 s

F1 (High) — dead tickers waste the Yahoo budget and starve live symbols. FOUND → PREPARED/TESTED (I1). Render app logs 6 Nov 21:19–21:20 UTC: `raw chart history failed for FM.US: raw_chart_failed:http_404 — falling back to yfinance`, followed by `History fetch failed for FM.US: Too Many Requests` for the same id, repeated for the `.US` and bare spellings (HEWW, KLD, IGN, IBML, IBDO, EMBH, IECS, JKE, JKK, FM). In the same second live symbols' history was also rate-limited (`EEX`, `BK`, `SPLG`). Root cause: `fetch_history_raw` (`core/providers/yahoo_chart_provider.py`) had no miss memory, and a definitive symbol-local 404 still fell through to yfinance, which queries the same `/v8/finance/chart/{id}` endpoint with a retry ladder. The quote path already had a `quote_miss` cache; the history path did not. Several of these ids are already proven dead (FM liquidated Jan 2025; SPLG renamed SPYM — see 29 Oct audit §3.3); #921 retired 52 Mutual_Funds rows on 5 Nov, but some ids are still being requested by another caller (the caller is UNVERIFIED — the log carries no page/route context).

F2 (Medium) — memory at 88 % of the instance limit. No OOM restart in the window (single instance `-8ch6m` throughout). Trend is upward across three audits. Carried B7.

F3 (Medium) — `/health` `app_version 8.14.5` ≠ `entry_version 8.14.8`. Per `docs/render_env_contract.md` §A, `TFB_APP_VERSION` / `APP_VERSION` must be unset (service ENV and env group `tfb-server`). Provenance only; owner action.

F4 (Low/efficiency) — repeated scoring passes. Logs show each KSA symbol scored 3–4 times within ~20 ms with different verdicts on the first pass (e.g. `2050.SR overall=52.21 conf=35.68 REDUCE` → `57.16 conf=77.65 HOLD`; `1831.SR SELL` → `HOLD`). This matches the documented settle loop (pass-1 on partial data). Not a defect if pass-1 is never published; this was not verifiable from logs alone.

3.2 GitHub Actions — FOUND

Census 30 Oct 00:00Z – 6 Nov ~21:05Z, 2,182 runs (lower bound; pagination gaps possible).

Workflow	Runs	Success	Failure	Latest
daily_sync	203 (24 schedule/dispatch)	180	19 (18 of 24 schedule/dispatch)	✅ 6 Nov 19:31
decision_surface_freshness	214 (28 not skipped)	21	14	✅ 20:45
release_decision_feed	57	45	12	✅ 20:49
track_performance	20	20	0	✅ 21:03
board_scorecard	6	6	0	✅
ci.yml	321	255	6	latest main push (a85edfc) **cancelled**; no completed CI on `main` HEAD
name_label_renewal	8	0	**8**	❌ 12:09 → fixed by I2 dispatch (✅ 21:34)
provider_target_coverage	8	0	**8**	❌ `[CH_BASELINE_STALE] baseline is 290.7h old > max 72h`
news_archive	12	1	**11**	❌ `identity_coverage_incomplete` (rows were written, APPEND_ACCEPTED)
workflow_repair_tests	28	25	3	❌ on all 3 main pushes (live-state audit exits 2, not a code bug)

Root causes: - **daily_sync 6 Nov 12:12 UTC:** `Portfolio response contract failed: foreign, blank or duplicate holding identity` (`scripts/run_dashboard_sync.py:5361`) → My_Portfolio FAILED → `decision_surface_freshness` (`PF_SOURCE_NOT_VALID`) and `full_refresh_coverage` (My_Portfolio `fresh_pct=0.0`) red. Green again at 19:31/20:45. Which holding row tripped it is UNVERIFIED (sheet blocked). Other failures sampled: final-publication `coverage_failed` / `decision_failed` (structural, N2 of 29 Oct). - **provider_target_coverage:** a failed run never saves a new baseline, so it cannot self-recover; needs an owner

`accept_baseline`/bootstrap dispatch (not done here: accepting a baseline is a policy decision). - **name_label_renewal:** all 128 bindings expired (3 on 19 Oct, 1 on 31 Oct, 1 on 1 Nov, 123 on 4 Nov 21:32Z) — FOUND → APPLIED (I2). - **ci.yml 3 Nov:** lean JS suite `FAIL E5 no rows -> empty map` on #910's push; later pushes passed. - **183 open PRs** (#1 is 387 days old; ~120 single-file "Update/Create" PRs from Aug–Sep). The merge queue remains the main bottleneck (29 Oct §4).

3.3 Google Sheets — FOUND / BLOCKED

Readable tabs only (quoted values): - **`Plan_Of_Record`** (fresh, refreshed 7 Nov 00:24 Riyadh): "feed EXECUTABLE (run 42280335882, until 11-07 06:33) | plans 0 | tickets 0 | executed 0"; "latest cockpit render 2026-11-06 23:59, output QUALIFIED_UNFUNDED, 10 rows"; "exchange holidays and half days are not modelled". `_Plan_Of_Record` has headers only. - **`_Data_Audit` stale and self-contradictory (High):** "Generated: 2026-06-19T20:53:55Z" (~140 days) yet "Refresh freshness: OK"; "Pages audited: 1", "Rows analyzed: 11". A stale tab that says OK is misleading; it should be retired or stamped stale. - **`Diagnostic_Report` stale (Medium):** last sweep 2026-06-06. - **`_Selection_Log` historical FX (Medium):** 17 of 103 parsed USD rows use a USD/SAR rate off the 3.75 peg by > 0.01; worst **3.7829 (30 Jul, NMM.US, GPOR.US; +0.88 %)** and **3.7317 (31 Jul, VICI; −0.49 %)**. USD/SAR is pegged at 3.75 by SAMA; deviations > 0.3 % indicate a derived/cross rate, not the peg. These are historical rows (Jul–Aug); whether current rows are on the peg is UNVERIFIED (the snippet was truncated at 7 Aug). - **`_Selection_Log` checks that passed** (220/220 parsed rows): Price SAR = price × FX within 0.5 %; long ordering stop < entry-low ≤ entry-high < TP1 ≤ TP2; shares × price ≈ ticket; GBX treated as pence. - **`_Shadow_Rank_Log`** current (last 6 Nov 06:22); cohort sizes irregular (11 on 3 Nov, 35 on 5 Nov vs normal 30). - **`Data_Dictionary`:** "Country" typed `number,#,##0.00`; "Previous Close" and "P/E (TTM)" typed `string` — type metadata errors (Low). - **My_Portfolio, Portfolio_Decision(_v2), Top_10_Investments(_v2), cash/cost-basis:** **BLOCKED** (UNVERIFIED). No holdings, quantities, cash, SAR total or v1/v2 comparison could be recomputed.

3.4 Portfolio and consolidated SAR — BLOCKED

The 29 Oct audit recorded one holding (FRST.US, −4.9 %, `BLOCKED; RECONCILIATION_REQUIRED: missing_evidence | [custody-unverified]`). Current holdings and cash could not be read. **Broker difference in SAR: unknown, not zero.** USD→SAR method in code: SAMA peg 3.75 with provenance (29 Oct verified); historical off-peg rows above are a separate defect.

3.5 Recommendations and forecast evaluation — FOUND

Source: Performance Clock run 42293576098 (7 Nov 00:21 Riyadh), `track_performance` v6.53.0. Records 28,465; matured 13,001; **decided 3,865**. Gross of fees and slippage. Same-day repeat keys are measured, not de-duplicated, so n overstates independent evidence.

Slice	Decided n	Win % [95 % CI]	Mean ROI	Stated reliability
INVESTABLE	1,242	**48.9** [46–52]	−0.29 %	71
WATCHLIST	2,405	55.9 [54–58]	+0.38 %	61
BLOCKED	204	76.5 [70–82]	−2.14 %	55
Reliability 85–100	171	**42.7** [36–50]	−1.00 %	87
Board executions	27	55.6 [37–72]	+0.97 %	75
1W target achievement	106	46.2	MAE 5.02 pp, bias −1.28 pp	—

- **Brier 0.2864 vs 0.25 baseline** (29 Oct: 0.2859) — no better than a coin flip. Reliability not monotonic; WATCHLIST > INVESTABLE inversion persists.
- BLOCKED shows a 76.5 % win rate with a −2.14 % mean ROI. A win definition that disagrees in sign with mean return should be checked (direction convention or a few large losses). FOUND, not investigated further.
- Canonical-performance provenance counts: `unproven_forecast_provenance` 23,166 of 28,465; `percent_points` 3,683; `ambiguous_units` 752; `schema_price_mismatch` 633 — most stored forecasts cannot prove they were recorded before the outcome, which limits any learning claim.
- Sharpe (gross): 1W −0.51, 2W −0.51, 1M 0.17, 3M −0.39.

Readiness: NOT READY. The live feed carries 0 tickets, which is consistent with the evidence. **No qualifying opportunity** is listed in this report.

3.6 Manual refresh, Apps Script triggers, dashboard — BLOCKED

Unchanged: these need the Apps Script editor, sheet edit rights and dashboard sign-in. `manual_refresh_priority.yml` last ran 13 Oct (success), `page_refresh_recovery.yml` 23 Oct. Nothing is claimed about end-to-end manual refresh behaviour.

4. Implementation register

#	Defect and root cause	Change	Files and links	Tests	Status
I1	Dead ids 404 on both raw hosts, then yfinance re-asks the same chart id (up to 3 tries, per spelling, per caller) → 429s that also hit live symbols' history	`yahoo_chart_provider` 8.16.0: with `TFB_YC_HISTORY_MISS_TTL_SEC` > 0, a symbol-local 404 on every host returns `[]` without the yfinance fallback and is held per Yahoo id for the TTL (bounded 60–86,400 s). 429/5xx/auth/network outcomes are never cached. Default 0 = byte-identical to 8.15.1	`core/providers/yahoo_chart_provider.py`, `scripts/verify_deployment.py` (pin + FLAGS row), `docs/render_env_contract.md` (regenerated, `--check` OK), `tests/test_ycp_history_miss_cache.py`, `tests/test_ycp_loopguard_b6.py` (version pin); branch `claude/sharp-heisenberg-ompct5`, commit `5563209`	15 new tests pass; all 15 fail on the base commit. Related suites (29 files): 673 passed, 23 skipped; 12 failures (`test_auth_wall_scope_path` W*, `test_fw2_stale_pe` w1b) fail identically on base (environment)	**PREPARED · TESTED**. Not merged, not deployed
I2	All 128 verified Name captions expired (4 Nov 21:32Z); daily check red 8/8	Dispatched the existing `name_label_renewal.yml` once (mode=renew, publish_branch=true)	Run 42297810424 ✅; branch `name-label-renewal/42297810424`: 122 bindings → expire 2026-11-13, 6 held	The workflow validates with the production loader	**APPLIED** (branch + draft PR), awaiting owner merge

To arm I1 (owner): merge → Render manual deploy → set `TFB_YC_HISTORY_MISS_TTL_SEC=21600` on the service. Acceptance: in the next 24 h of Render logs, `YC-MISS` lines appear for dead ids, `History fetch failed … Too Many Requests` count falls versus the same window today, and no live symbol is held as a miss. **Rollback:** I1 — unset the variable (restart) or revert the commit; the off state is byte-identical. I2 — close/revert the renewal PR. Nothing touched a gate, threshold, the workbook or Render configuration.

5. Before / after metrics

Metric	29 Oct audit	This audit	Note
Render /health	200	200 (0.28–0.51 s)	
Render 5xx	0 (~24 h)	1 × 502 in 7 days	
Render peak memory	82 %	**88 %**	worse
Live deploy vs main	equal	43 commits behind (mostly Actions-side)	
Scheduled daily_sync failures	19/20	18/24 (window 30 Oct–6 Nov)	latest green
Name captions valid	4/128 on main (123 pending #873)	0/128 on main → 122/128 on renewal branch	
provider_target_coverage	—	0/8 green (stale baseline)	
news_archive	red	1/12 green	
INVESTABLE decided win rate	48.8 % (n=1,042)	48.9 % (n=1,242)	overlapping samples
Brier	0.2859	0.2864	
Executable tickets in live feed	0	0	
Broker difference (SAR)	unknown	unknown	no statement

No overall accuracy or improvement percentage is claimed. I1 has no production effect until it is armed.

6. Prioritized remaining backlog

ID	Priority	Item	Dependencies	Acceptance criteria	Effort
R1	Critical	Keep recommendations fail-closed (N7): de-duplicate same-day keys, evaluate net of costs, fix the INVESTABLE/WATCHLIST inversion before any promotion	Dedup decision	Calibrated on de-duplicated keys vs a benchmark after fees; Brier < 0.25 on a chronological holdout	1–2 days
R2	High	Give the audit read access to the decision tabs (a per-tab CSV export by gid, a read-only Sheets API credential, or a small JSON snapshot published by the existing sync)	Owner	My_Portfolio, Portfolio_Decision(_v2), Top_10(_v2) recomputed in SAR next audit	2–4 h
R3	High	Broker reconciliation (N6)	Owner statement/export at a cutoff	Positions, qty, cash and cost basis matched; differences in SAR	0.5 day after the file
R4	High	Find the My_Portfolio “foreign, blank or duplicate holding identity” row from 6 Nov 12:12Z	Sheet access	Root cause named; recurrence prevented or explained	2 h
R5	High	Merge the renewal PR (I2); re-dispatch weekly until renewal is automated (N5)	Owner merge	Name-label check green; 13 Nov expiry renewed	10 min/week
R6	High	Merge + arm I1; then add the still-requested dead ids to `TFB_YC_SYMBOL_SKIP` or retire them at the source (N3)	Owner merge/deploy	Fewer 429s in Render logs; no live symbol held as a miss	30 min
R7	Medium	Re-bootstrap `provider_target_coverage` baseline	Owner policy dispatch	Workflow green on next scheduled run	15 min
R8	Medium	Render memory at 88 % (B7): profile caches / worker count before any plan change	none	Peak < 80 % over 7 days, or a costed proposal	0.5 day
R9	Medium	Retire or stamp-stale `_Data_Audit` and `Diagnostic_Report` (June) so they cannot read “OK”	Owner (Apps Script)	Tab shows its age, or is removed	1 h
R10	Medium	Remove `TFB_APP_VERSION/APP_VERSION` from Render ENV and `tfb-server`	Owner	`/health` app_version == entry_version	5 min
R11	Medium	Investigate BLOCKED bucket: 76.5 % wins with −2.14 % mean ROI	none	Win definition and sign convention documented	2 h
R12	Medium	Complete CI on `main` HEAD (latest push run was cancelled)	none	One green ci.yml on `a85edfc` or later	15 min
R13	Enhancement	Dashboard: document its data source, refresh cadence and currency rules in `docs/`; provide a reviewer path that needs no personal login (B12)	Owner	Next audit reviews every page	2 h

ID	Priority	Item	Dependencies	Acceptance criteria	Effort
—	—	Carried: N2 structural red on final publication (#831, #846), N4 Open=0.0 null-vs-zero, B4 cron delay, B9 FX fallback age, B11 manual refresh	see earlier reports	unchanged	—

7. Final verdict

- **Operationally healthy? Partly.** The API is up with no 5xx since 1 Nov, and the latest sync and release cycle was green. But memory is at 88 %, three workflows are permanently red (name labels, which this session addressed, provider coverage and news archive), the Yahoo budget is wasted on dead ids (fix prepared), and `main` HEAD has no completed CI.
- **Financially consistent? Not verifiable end-to-end.** Historical selection-log arithmetic is internally consistent (220/220). Some historical USD rows used off-peg FX. Holdings, cash and the SAR totals could not be read, and broker reconciliation is blocked.
- **Sufficiently validated for recommendation use? No.** INVESTABLE wins 48.9 % gross, the top reliability band is anti-calibrated (42.7 %), and Brier is 0.2864 against 0.25. The system correctly publishes 0 executable tickets.

Decision support only; not investment advice. No recurring tasks, schedules or monitoring were created. The one workflow dispatch (name-label renewal) was a single manual run of an existing workflow; it pushes a review branch and never writes to `main`.
